International communication encompasses everything from one-to-one cross-cultural interactions to the global reach of a broad range of information and communications technologies and processes. Routledge Studies in Global Information, Politics and Society celebrates – and embraces – this depth and breadth. To completely understand communication, it must be studied in concert with many factors, since, most often, it is the foundational principle on which other subjects rest. This series provides a publishing space for scholarship in the expansive, yet intersecting, categories of communication and information processes and other disciplines.
